The product suite consists of AutoCAD software for both desktop and mobile use, as well as numerous associated products like eDrawings, OnDemand, Eco, and others. Since 2014, the suite is part of Autodesk's subscription model: customers can buy individual products within the suite or subscribe to all of it. Autodesk's AutoCAD software enables users to design, create, and edit two- and three-dimensional drawings, diagrams, and models. In the 1980s, the

name was considered to be a "high-class" reference to Soviet-era icons of design and science. In 2009, Autodesk introduced AutoCAD 2009, which introduced new capabilities and visual design style (dark and clean), and users have embraced the more user-friendly interface. The software is available for desktop computers with Intel processors and Nvidia or ATI graphics hardware, as well as smartphones and tablets. Other products within the suite provide technical support and utilities for managing files, such as DWF and DWF2X, and visual design, such as LiveShapes, eDrawings, and OnDemand. The suite includes an online cloud-based system for accessing design files through the cloud. History AutoCAD has been a registered trademark since 1982, when it was released

for the first time. Autodesk AutoCAD was initially released in December 1982 as a desktop app, and then later as a "standalone" app running on Apple II computers. Since then, it has been ported to a variety of platforms, including DOS, Windows, OS/2, Mac OS X, Linux, and others. AutoCAD was originally developed by the National Center for Supercomputing Applications (NCSA), in partnership with the University of Illinois, before being sold to the consulting group Weyerhaeuser in 1983. For a long time, the AutoCAD product was the only major CAD product developed by Autodesk. In 1989, Autodesk released AutoCAD LT, which is based on the same technology as AutoCAD, but runs on cheaper microcomputers, such as the ones used in desktop computers at the time.

AutoCAD LT was targeted at smaller organizations, such as architectural firms. In 1991, Autodesk released AutoCAD 3D Modeling, which included the 3D CAD component that is now included as part of the AutoCAD product family. AutoC

For young entrepreneurs in San Francisco, a good idea just might come out of the crisis. "There's a very interesting opportunity to be

in this moment," said Sara Correa, a general partner at venture capital firm Andreessen Horowitz, who has invested in several apps like Lyft and Evite. Correa came up with the idea for an app called Roadhouse, which has sold thousands of shares in stock to pay for the first version of the app to launch. Roadhouse is designed for food delivery and aims to help people find fresh produce and takeout within one mile of their location. "So if you're working from home or if you just need to grab a sandwich for lunch, the app is great," Correa said. The pandemic has presented some challenges to young people who rely on cars, public transit and ride-hailing services. Some workers rely on being able to drive to work, particularly in California, where the state has limited closures of businesses and events. The San

Francisco Bay Area already has an app for ride sharing — the local ride-hailing company Gett. There are also plans to create an app called CodeForAmerica, which encourages residents of large cities to help one another in this way. "You can come up with a crazy idea, but if it's a good idea, a lot of young people will go for it," Correa said. Roadhouse is still working out how to add fruits and vegetables to its platform. "We could have an app for produce delivery," Correa said. Schools have also been disrupted, but there is a small minority of young people who are lucky enough to have a laptop at home. Roadhouse co-founder Iyad Youssef, 28, remembers

What's New in the?

AutoCAD 2020 introduced Markup Assist, a new type of drawing that automatically makes changes to the AutoCAD drawing as you review it. This new drawing type, available in AutoCAD 2023, is based on AutoCAD's existing import/markup function, but introduces many new, powerful features. AutoCAD 2023 introduces three new Markup Import tools that automate the process of quickly sending feedback to clients, colleagues, and design teams to improve your designs. A new Markup Assist tool automatically makes changes to AutoCAD drawings to reflect changes you've made in the drawing, without additional drawing steps. All four tools are also available as part of the free Drawit application, a drawing-focused collaboration tool that integrates with

AutoCAD and Office 365. Here's how Markup Import and Markup Assist can help you: 1. Send and incorporate feedback while still reviewing your design. When you're designing and building a product, it's vital to incorporate feedback as soon as possible. Speed up the process by sending feedback to a client or design team from paper, PDFs, and even comments in chat apps. With Markup Import, you can import and markup printed paper or PDFs from your design office or home. You can also import comments or text added to a chat conversation. 2. Make design changes while still reviewing your design. During the process of creating a paper prototype or building a proof, you may make changes that affect the entire design. You can instantly incorporate these changes into your

drawing with Markup Assist, without the need to create a new drawing. Markup Assist will automatically make any changes to the design that you make as you review it. 3. Make changes to your design in a new version of AutoCAD. When you send feedback, your drawing is automatically updated, and all those changes are reflected in the next version of your drawing. When that new version is released, you can send your feedback to all the stakeholders who were working on the last version, and your changes are applied as they update to the new version. 4. Collaborate with clients, colleagues, and design teams in new ways. When you use Drawit, you can use any of the tools—Markup Import, Markup Assist, and others—right within the application. Instead of checking work in and out of a

specific tool, you can
