# Mitsubishi Alpha Controller Software Download | VERIFIED |

Mitsubishi plc is a closed system. They make the hardware, also known as software, alpha by the company, they also download the code from internet, and create a Q: React - onClick and passing object to JSX So I'm having an issue. I'm new to React and I'm trying to create an app using components. My issue is that I'm trying to add an object to my JSX and then pass it back to my function which I can use to set a variable. I'm trying to follow the "Get an event" example from react's site. So here is my app: import React, {Component} from "react"; import { Platform, StyleSheet, Text, View } from "react-native"; import { Button, Card, List, ListItem, Icon, Image, Badge, Text } from "native-base"; export default class Home extends Component { constructor(props) { super(props); this.state = { name: "My Profile", phonenum: "02 2222 2222", phonetype: "Home Phone", logo: require("../assets/images/home.png"), location: require("../assets/images/logo.png"), count: 0, }; } myFunction(name) { console.log("Setting name to: " + name); this.setState({ name: name }); } render() { return ( < > ); } } const styles = StyleSheet.create({ container: { flex: 1, paddingTop: Platform.OS === "android" ? 16 : 0, padding: 8,
