The features of Photoshop Elements follow the same design as Adobe Photoshop; they are organized into the same dialogs and workflows and employ the same technology. Photoshop Elements 8 was the first version of Photoshop and is currently the only version designed for designers and hobbyists and the only version that lacks the intuitive interface and efficient use of layers that make Photoshop so useful. Photoshop Elements 8 still comes with most of the advanced features that designers are accustomed to, like special effects like adjustment layers and color effects. Photoshop Elements is more than a Windows-based graphics program, but it does lack the raw power of a full featured graphics package like Photoshop. It may be suitable for those just wanting to create pictures that can be viewed, printed, and saved on the web, but it is not appropriate for high-end graphic design. Cardiac developmentally regulated proteins during zebrafish early embryogenesis. The Rana zebrafish is becoming a popular model organism in developmental biology research due to the optical clarity of the embryo and the ease of genetic manipulation. Studies to identify genes important for cardiac development by means of genetic mutagenesis in this model are being performed. Here, we isolated a number of cDNAs encoding developmentally regulated Rana proteins. These include a homeobox gene, *nrt-1*, that is involved in primitive-streak formation. Its role in cardiovascular development is being investigated. In addition, we identify *etsrp-1* and *vega-a*, which are involved in gastrulation and early somite formation, respectively. The expression patterns of these proteins are compared to that of the zebrafish cardiac muscle specific myosin light chain, *cmlc2*, to establish their relative importance for cardiac development. These results demonstrate that cDNA cloning is a powerful approach to elucidating the molecular basis of cardiac development. A studio in Eugene was fined a total of \$10,000 in city noise violations because the upstairs neighbor was too loud. The owner of the Banana Factory, located at 601 Elm St., has been issued fines for violating city noise ordinances and has to adhere to a sound ordinance issued by the Eugene City Council because his upstairs neighbor was playing too loudly. A court order issued a decade ago on the property requires a fine of at least \$10,000 if it's enforced, which is roughly \$21,000 in today's currency. The owner, which has invested considerable money in renovating the building, has to get permits to do work on the building and, in addition to the fines, it must pay for building inspections from the city. The violations occurred a decade ago, according to Tom Wood, senior policy analyst for the City of Eugene who reviewed the case. "They hired a building inspector to go over the building," Wood said. "They did a lot of work and found a lot of violations." The owner of the apartment building and the former tenant were issued fines of \$10,000 each. The fines were issued on June 18, 2007. The fines were issued by the Eugene City Council after the city performed an audit of the Banana Factory. The Eugene City Council oversees the Operation Sound License Program, which regulates the operations of theaters, clubs and discos. The council creates restrictions on those who are
